

SPANGLE THE WINSLOW WAY

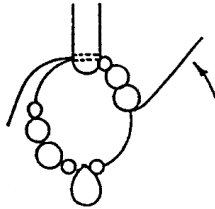

1

Thread chosen beads onto wire (5"/125mm).

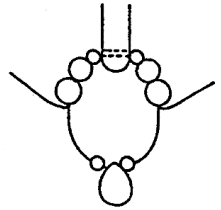

2

Pass ends of wire through hole in bobbin, one in each direction.

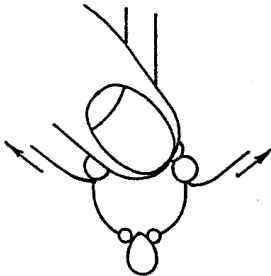

3

Feed free end of wire through first three beads and bend end upwards.

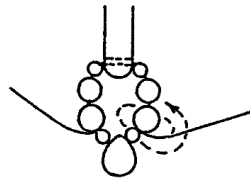

4

Repeat on other side.

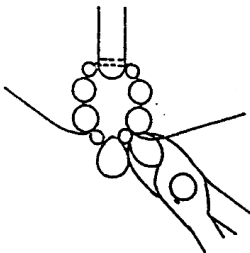

5

Hold bottom of bobbin with finger and thumb. Using pliers pull wire from each side to take up surplus wire until beads are close to bobbin.

6

To secure spangle, twist end of wire twice around wire between beads. Repeat on other side.

7

Using wire cutters, cut off excess wire close to beads so that end is concealed. Reshape spangle.

PLEASE NOTE

When using our ready made spangles untwist and straighten wire with pliers before commencing.
